

Here are some things that SouthWare does not address well or at all in the Manufacturing Environment:

- Capacity Planning by Machine and Department
- True Labor tracking
- Overhead Calculations
- Scrapping
- Modifying Goods Issues to Work Orders while WO is in Process
 - Allowing for over issues and under issues with proper tracking
- Work Order Efficiencies
- Labor Efficiencies
- Master Work Orders – One Work Order Drives all Sub-Work Orders
- Effectivity Dating in Work Orders
- Mass Change Delete of components
- Mass Change Delete of Effective Dating
- Daily / Weekly / Monthly Time Series Planning Reports
- Daily / Weekly / Monthly Pegged Requirements Reporting
- Raw Goods Lot / Serial Number Tracking into Finished Goods - This may be better now
- Work Order Variance Reporting
- Feed Back Point Tracking
- Work In Progress tracking
- MRP reporting to include Quotes if needed
- Finite and Infinite capacity planning models for Machines & Labor & Departments
- True Routing functionality
- Labor Rate Tracking by Operation
- Operational Instructions
- Outside Processing
- Que / Setup / Production Time Tracking
- Department Labor Reporting
- Department Labor Efficiencies
- Standard vs Non-Standard Processes
- By-Product Tracking
- Actual vs Planned Material Costs comparisons
- Actual vs Planned Labor Costs Comparisons

Continued:

- MMS Choice Suite - allows for Options
 - This allows the client to build a Standard BOM / Product then select items that have options
 - From a drop down list those options can be chosen
 - Costs updated if appropriate etc
- MMS Food and Beverage Suite
 - Recall Tracking for Lot Numbers / Serial Numbers
 - HACCP Documentation Support
 - Batch Based Tracking and Work Order Processing
 - Catch Weight / Variable Weight Tracking is Supported
